EQUIPMENT

Assessment by Allied Health and Clinical Staff

Residents are assessed for all equipment needs by the Occupational Therapist in collaboration with residents, family members and staff.

Residents are assessed for equipment to help with balance and mobility, activities of daily living, pressure care, upper limb, oedema management and falls prevention. Assessment may include liaising with equipment suppliers and specialists.

The Occupational Therapist will prescribe and train residents and staff in the use of equipment.

The Occupational Therapist may assess your family member as needing certain equipment to assist with their care needs, safety and comfort which are not provided by the facility.

Your Occupational Therapist or Clinical Nurse Manager may consult with you concerning further equipment needs and the purchase of these items.
